Introduction

Blockchain technology is a brilliant Internet-based innovation. Traditionally, a server stores all types of data in a centralised location that is subject to major security risks. The developers of the Blockchain technology implemented a system that scatters the stored data across the computer around the globe. The security of this system is unprecedented, which is why the MartianDoge development team decided to build a currency that works on the Blockchain network.

The MartianDoge token is different from anything the Blockchain world has ever witnessed. With the development of new technologies and commercialization, MartianDoge will become the future currency of the globe. The Whitepaper will convey the clear and concise vision for MartianDoge token, and the story behind MartianDoge, the additional technology that the development team of MartianDoge will bring, the specific distribution of token and a detailed timeline/roadmap of the project.

About MartianDoge

MartianDOGE is the first-ever NFT project building a groundbreaking AR Marketplace, virtual space land, and utilizing the revolutionary Space Launch System (SLS).

The AR Marketplace will allow people to earn, trade, and collect AR (Augmented Reality) NFTs – a new, unique type of Non-Fungible Tokens. With MartianDOGE virtual space land, earning blockchain-based income is easier and faster than ever. You can earn tokens simply by playing and exploring our advanced NFT-based Martian Doggo Virtual Space. As you conquer the virtual Red Planet, you will also earn real rewards here on Earth. Getting rich was never more fun!

The AR Marketplace will be released before the MartianDoge presale and will provide massive utility to MartianDOGE holders in the future. Are you ready to go to Mars? You can do that with MartianDOGE: the future currency of Mars!

AR NFT Marketplace

MartianDoge is the first ever NFT project building a groundbreaking AR Marketplace and utilizing the revolutionary Space Launch System (SLS).

The land of Mars is full of exotic alien creatures which you can capture, trade and collect! The creatures come in an NFT form – but these are not just your usual NFTs. The virtual creatures that you can collect on the surface of Mars are AR (Augmented Reality) Non-Fungible Tokens. These advanced NFTs are very unique and very valuable – trading them on the MartianDOGE 3D/AR Marketplace can earn you massive rewards!

Are you excited to collect this new and groundbreaking type of NFTs? The first version of the MartianDOGE Augmented Reality Marketplace will be launched before the presale, so you will be able to enjoy your first AR NFTs very soon!

SPACE LAUNCH SYSTEM

The Space Launch System (SLS) is the most revolutionary feature of MartianDOGE, and the supporting reason why MartianDoge is able to generate so many rewards for the MartianDOGE community.

The Space Launch System is an advanced Artificial Intelligence (AI) mechanism designed to handle the boosting phase of buyback feature in a maximally profitable way. SLS works by detecting resistance & ATH (all-time high) by tracking the historical pricing of MartianDOGE and boosting the price through automated buyback during every crucial phase detected by our system.

Martian Doggo Virtual Space

The Mars colonization program officially starts after MartianDOGE lands on Mars. MartianDOGE starts building the colony - and needs your help in the mission!

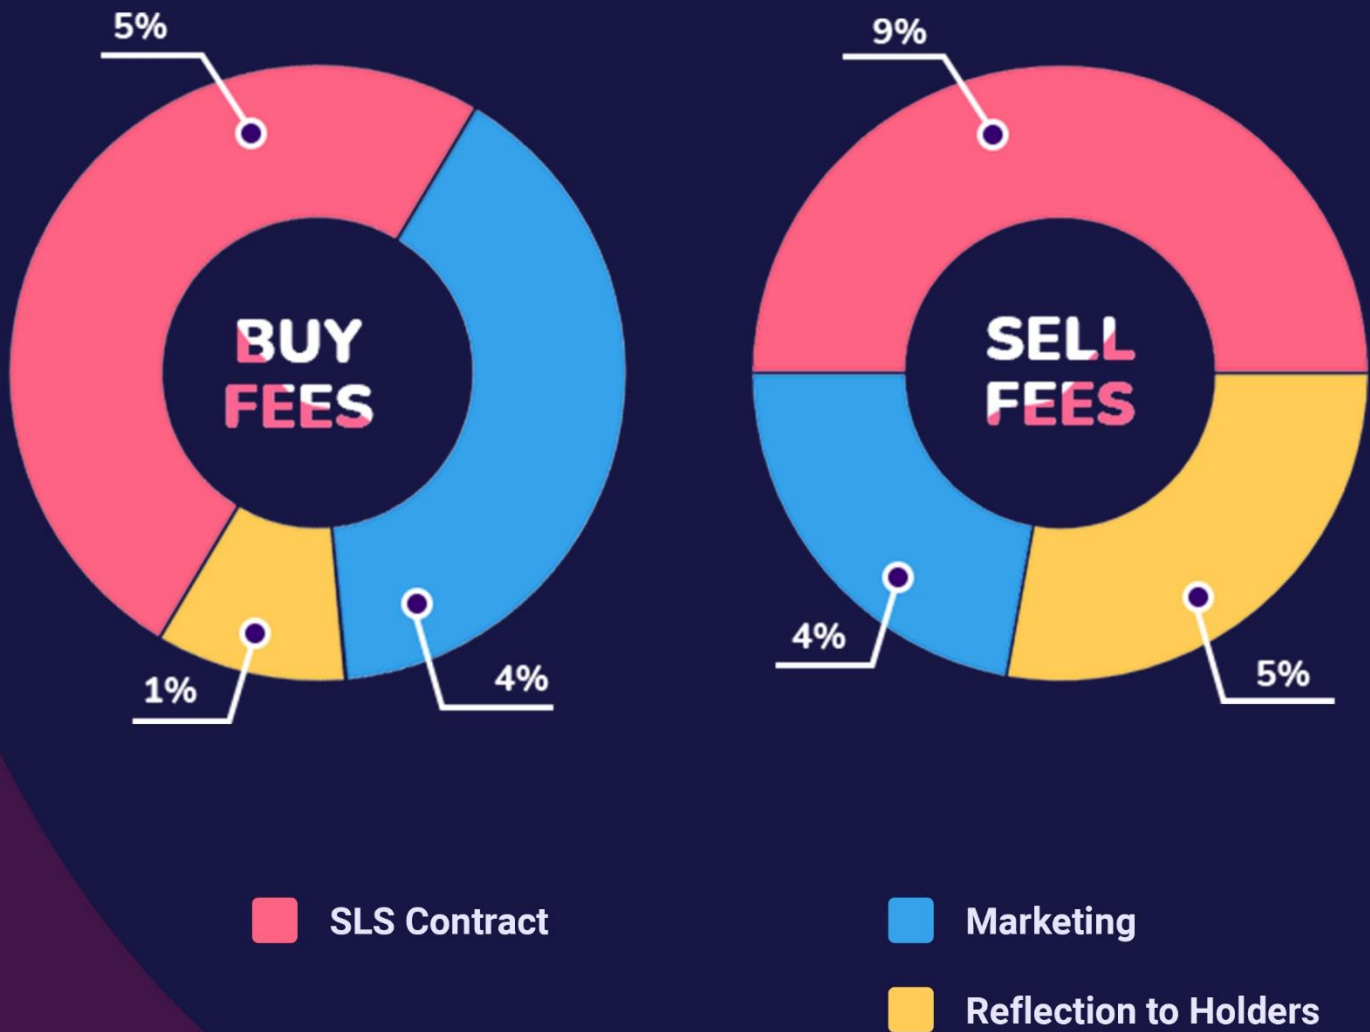

The Martian Doggo Virtual Space is an advanced, decentralized, blockchain-based virtual real estate game featuring the NFT (Non-Fungible Token) technology. The users of the Martian Doggo Virtual Space can explore the vast, fascinating surface of Mars in order to conquer and build the unclaimed land into a huge, vibrant new colony.

As you play the game, you will be able to earn massive rewards by buying, selling, trading and collecting plots of virtual land, and get exciting gifts through mining for resources. The conquered land can also be put up for sale among the users of the Martian Doggo Virtual Space, allowing you to sell it for crypto!

Tokenomics

Tokenomics are the core of each token, take a look at our detailed breakdown of our token buying and selling fees.

Token Distribution

A total supply of one trillion MartianDoge is supplied. The must be handed out wherever they belong. Here's how this will work ...

 Staking

 Marketing

 Private sale

 Public Presale

 Pancakeswap Liquidity

 Airdrop

 Advisor

 Team

 PinkSale

 MartianDoggo Virtual Space - Locked

Road Map

MartianDoge sets its sights on being the next Grand Token. We are in the early stages and intend to emphasize marketing and build a strong community. Following that, we will focus on several lists.

Conclusion

MartianDoge sets itself the goal of becoming the next Grand Token. MartianDoge is different from anything the Blockchain has ever seen. Having exceptionally unique tokenomics developed by a team of experienced developers, MartianDoge is on the way to the future coin of the globe. Continue with wins and falls, promising to reward our faithful members with a significant return on their investment.
